

Fire Management Performance 2016-2017

2016

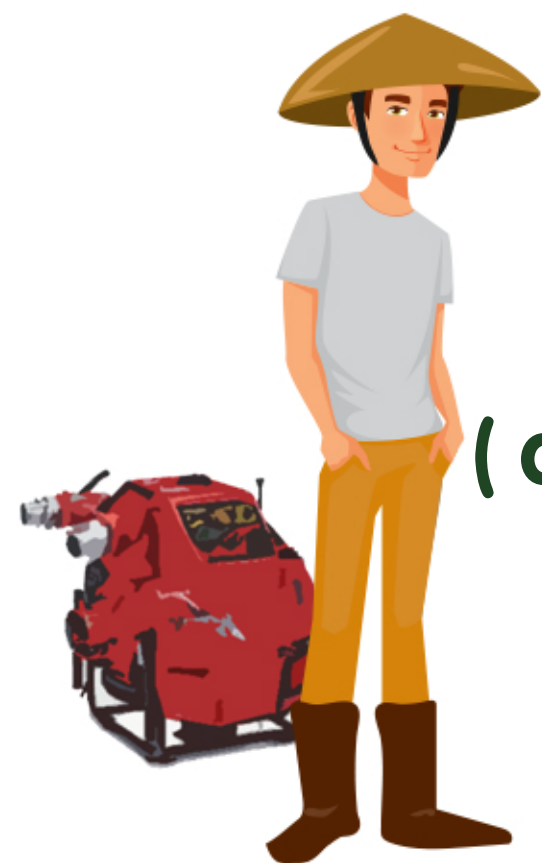

1. Hotspot information does not always correlate with reality on the ground, however the data becomes a warning tool.
2. Ground check is the key to ensuring the existence of real firespots.

2017

1. The cause of the fire was the result of the actions of careless and irresponsible individuals.
2. Affected area of 2 Hectares.
3. Extinguishments can be completed in less than two hours due to the speed of the response to hotspot information and team readiness.

To comprehensively improve fire prevention efforts at the landscape level, Astra Agro is developing a program to form groups in which local communities (community and farmers care about fires MPA/KTPA) would take part in fire prevention efforts in areas adjacent to the company.

70 MPA/KTPA
(as of June 2018)

**Fire extinguishments in
community land is conducted by
MPA and KTPA in collaboration
with Astra Agro's team**

32 fire extinguishments in 2016
51 fire extinguishments in 2017

**Fire fighting occurs in national fire prone
areas in Riau and South Kalimantan**
